

ADDITIONAL FASTENING FOR ROOF WALKWAY FOR TILE ROOF

If the intention is to attach to the roof walkway a horizontal rail or a rope fastener to be used when climbing on both roof faces, the support piece attachment must be secured by additional fastening and through-bolts.

INSTALLATION

- Place the additional fastening in its position and attach it to the batten with one 7x50 HPAC screw.
- Insert the auxiliary batten in its position and drill attachment holes in it.
- Screw the M8x65 hexagonal screws and M8 hexagonal nuts in their positions. Remember to place washers below and above the joint.
