THE NEXT LEVEL**

SAFELINE

Pisko® SafeLine wire system

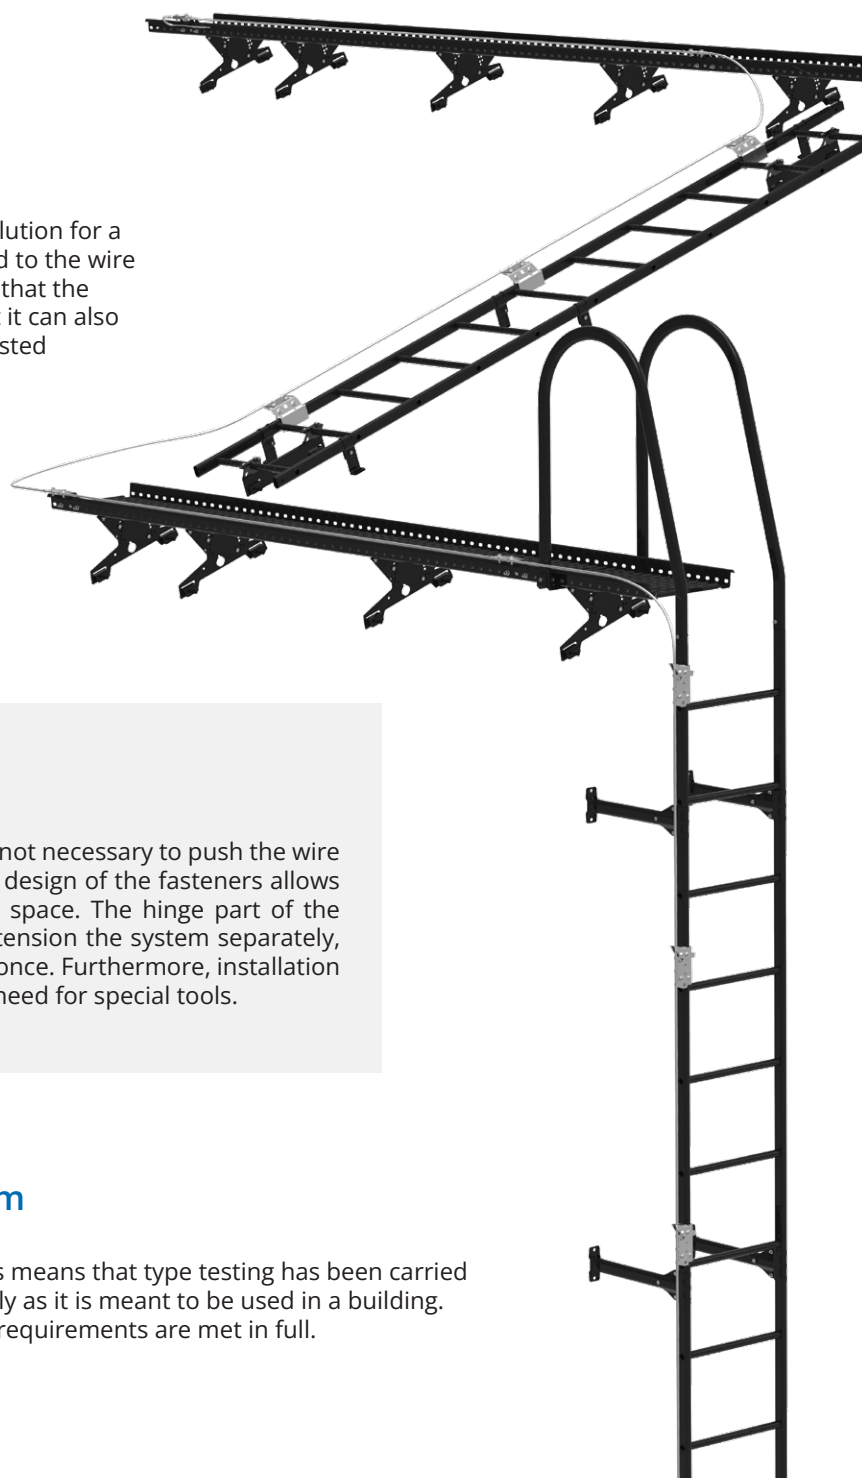

Pisko® SafeLine wire system is a simple and versatile safety system

SAFELINE

Pisko SafeLine wire system is safe and functional total solution for a uniform safety rope anchoring point. The user is attached to the wire system all the time to prevent falling. It is recommended that the system is installed as a part of the Pisko access ways, but it can also be installed directly to the structure in separately type-tested applications.

Modular Pisko SafeLine wire system, made of stainless steel, is versatile – implementation can be continuous full-length wire or assembled from cut-to-length wires.

Installer friendly ensemble

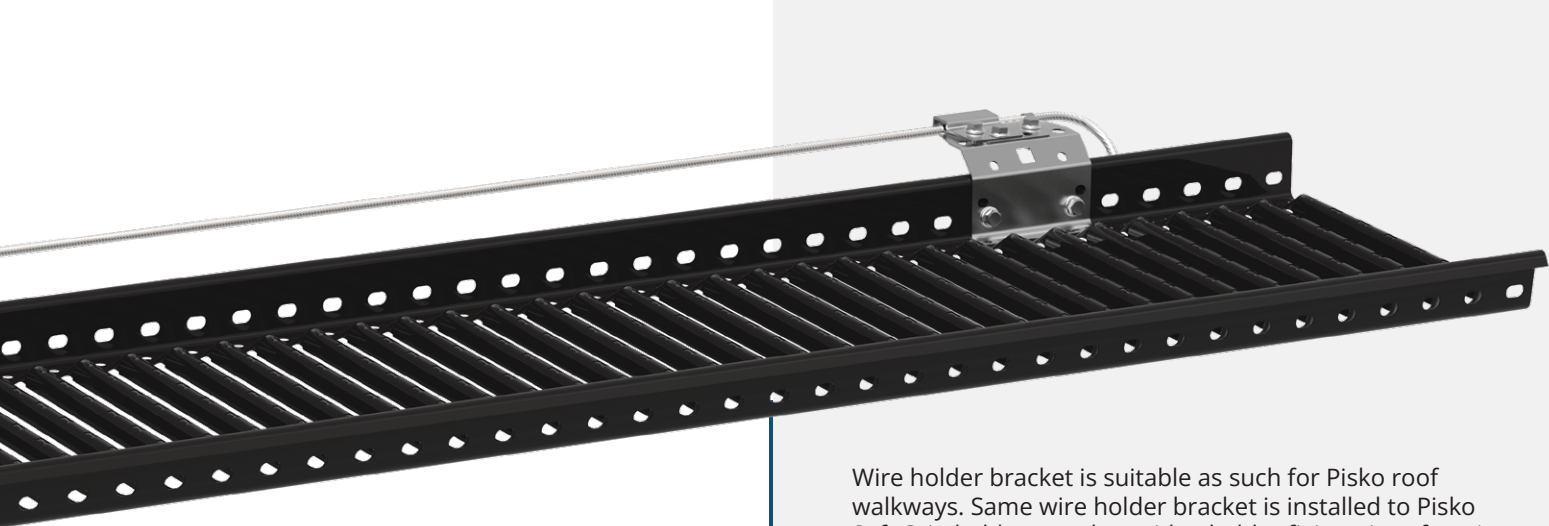

Pisko SafeLine wire system is easy and fast to install. It is not necessary to push the wire through the wire holder brackets when installing, as the design of the fasteners allows the wire to be pulled into place to the fastener's open space. The hinge part of the fastener locks the wire in place, so there is no need to tension the system separately, and the system is installed to the appropriate tension at once. Furthermore, installation can be carried out using standard installation tools – no need for special tools.

C900083

Patented and certified system

Pisko SafeLine is certified as a system – this means that type testing has been carried out with the fixing systems in such assembly as it is meant to be used in a building. The P-marking indicates that the technical requirements are met in full.

Wire system components

Pisko SafeLine wire system is a simple package. It consists of a couple of main components and components supplementing the functionality of the system.

Pisko SafeLine wire system components:

- Pisko SafeLine wire holder bracket
- 8 mm wire
- Glider
- Ladder fixing piece for wire holder
- Glider stopper kit for ladder
- Glider end stop for wire holder bracket

As complementary accessories there are available terminals to extend the wire as well as a few different options for terminating the wire.

Pisko SafeLine wire system has technical guarantee of 50 years

Wire system's glider – works in all weather conditions

Wire system's glider slides very smoothly along the wire with the user. The glider made of acid-resistant steel also works perfectly even in the winter.

Glider has been certified as part of the Pisko SafeLine wire system. In addition, it has been tested as separate personal protective equipment and the glider has CE marking in accordance with EN 795.

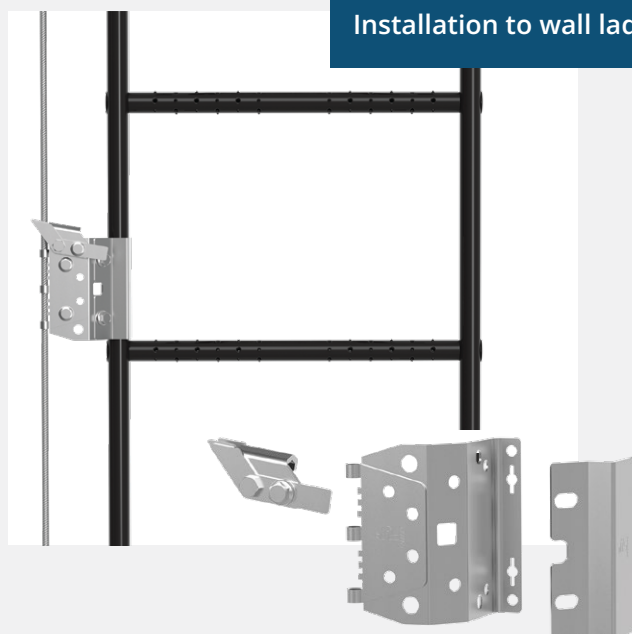

Wire holder bracket is suitable as such for Pisko roof walkways. Same wire holder bracket is installed to Pisko SafeGrip ladder together with a ladder fixing piece for wire holder.

Installation to roof ladder

Pisko SafeLine wire holder bracket + Ladder fixing piece for wire holder

Installation to wall ladder

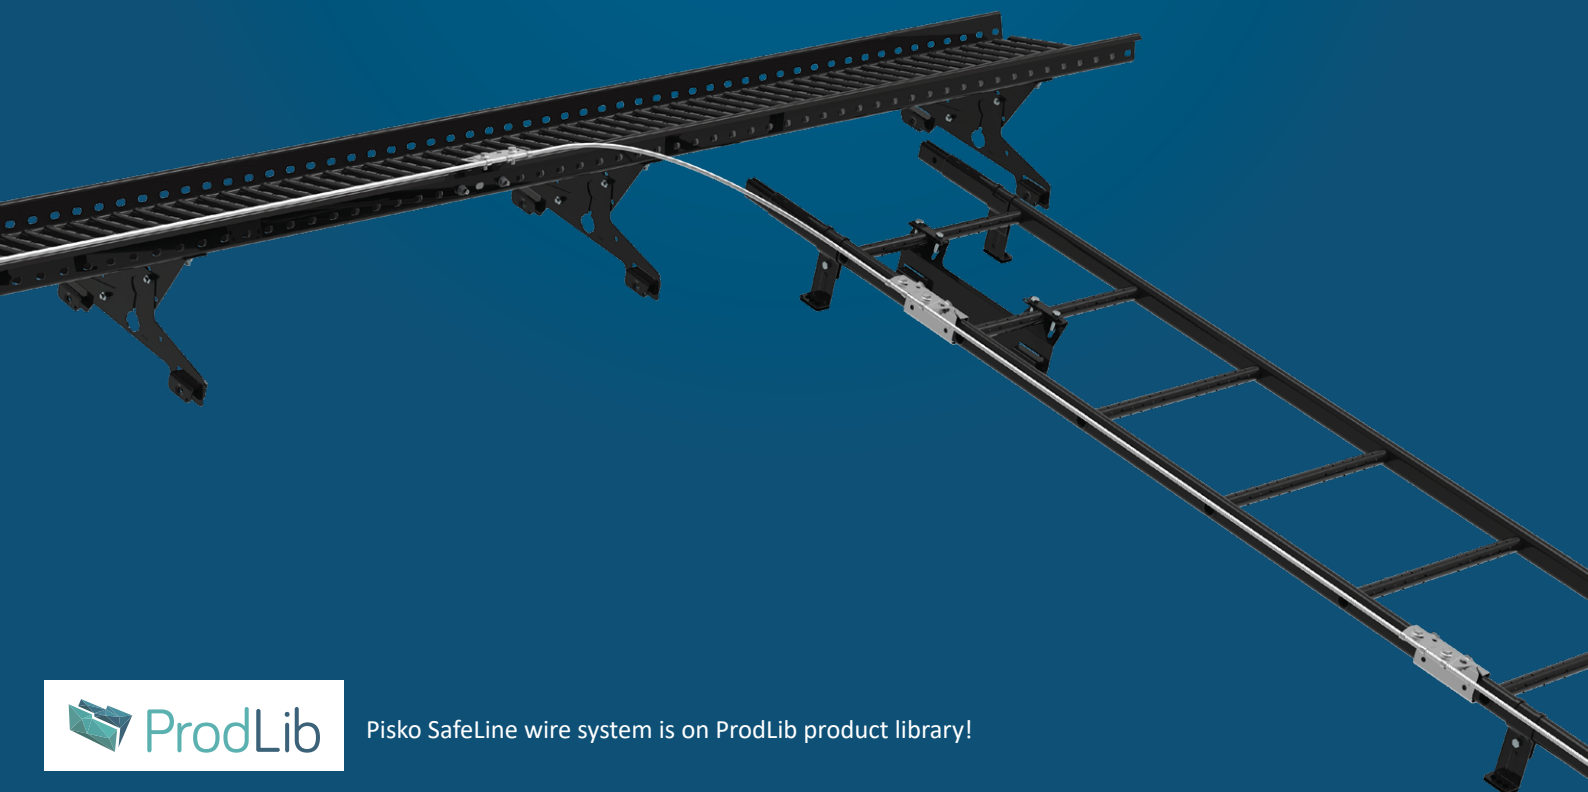

Pisko SafeLine wire holder bracket + Ladder fixing piece for wire holder + Glider stopper kit for ladders
