Modern solutions for fixing roof safety products on tile sheet roofs

Fasteners are suitable for all tile sheets with batten spacing of 350 mm and 400 mm

Versatile

Fastener's design follows the surface of the roofing which allows installation on all tiled steel roofs with batten spacing of 350/400 mm, with step height up to 30 mm. No need separate product for every manufacturer's tile sheets!
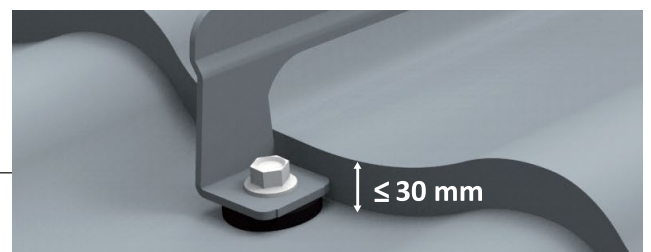

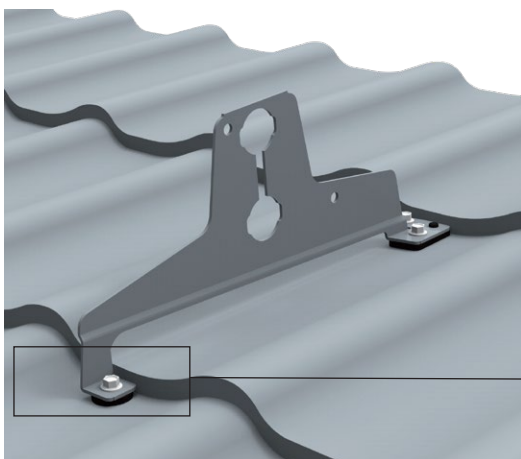

The fasteners are extensively tested and allow both snow guards and roof walkways to be fixed in a modern and compliant manner, withour compromising on installation speed, convenience or product appearance.

Watertight and firm fixing

The screw fixing positions are designed to allow installation even on narrow battens. If necessary, the overall strength of the fastener can be increased by using three screws at the top end of the fastener.

The new innovative sealing solution works on all roofs. The seal set makes installation quick and easy, and the result is a sturdy, good-looking and always watertight!

≤ 30 mm

### Added value through design

The product is always fixed to the roof supporting structures in the same way. This eliminates the need for separate installation kits and provides a strong fixing that does not stress the roof surface when using safety equipment.

The air gap between the roof and the base of the fastener substantially reduces the moisture load on the roof and thus the risk of dirt accumulation.
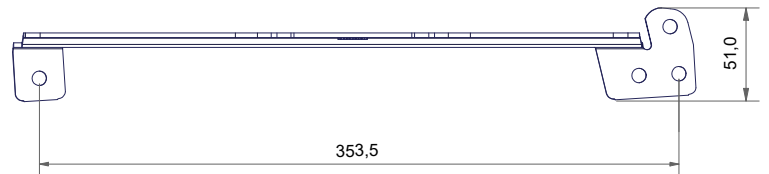

The product has an eye-catching appearance and is designed to fit the most common tiled steel sheets in Finland! A patent has been applied for the solution.
